

PRINTING DIRECTIONS

Be sure to choose landscape mode, borderless printing, appropriate paper type and finish (smooth card stock/ photo/ presentation paper gives best results). For fast printing, choose black and white setting. Each page prints two cards. Then just score, cut and fold! Final size is 4.25" x 5.5". Print page 2.

CREASE (you may want to practice this first on blank card stock):

1. Instead of professional tools, you can use a straight edge and the dull side of a butter knife.
2. Lightly mark 4.25" from the edge of the short side on both ends of the paper. Do this on the printed side.
3. Place knife edge on mark. Line up straight edge so that knife will start and end on the marks. It may help to place a few sheets of newspaper paper under fold area as it is being creased.
4. Firmly hold straight edge while making a crease with dull edge of blade. Erase pencil marks.
5. Fold after cutting.

CUT:

1. Find the center of card at 5.5" from long edge and mark at opposite sides of page.
2. If using scissors, draw a light line with pencil and straight edge.
3. Cut with scissor or craft knife and straight edge.
4. Remove pencil marks.

FOLD:

1. Gently fold card along creased edge.
2. Corners should line up.

EMBELLISH:

1. Use your own coloring scheme with pencils, paint or marker to personalize!
